

CLARETES NISHOBAN – Software Engineer

Email: charles.nishoban@gmail.com | Phone: +94719286089 | Portfolio: clare06.github.io | GitHub: [Clare06](#)

Summary

- ◆ Experienced in full-stack development using **Angular**, **Spring Boot**, **React (TypeScript)**, and **Node.js**.
- ◆ Skilled in implementing **Microservices** and **Event-driven** architectures.
- ◆ Built **CI/CD** pipelines with **Jenkins**, deploying **Serenity Cucumber** builds to Azure, integrating GitHub **webhooks**, and working with **GitLab pipelines**.

Education

- ◆ BSc. (Hons) Information Technology - University of Moratuwa (06/2021 - Present)

Skills

Software Development	Angular, Spring Boot, MySQL, OptaPlanner , REST API, Serenity with Cucumber (Automation) , React (TypeScript), NodeJS, GraphQL, PostgreSQL, Single-SPA (microfrontend framework), Prisma (ORM), Event Driven Architecture
Cloud	Azure VM, AWS RDS, AWS CloudFront, AWS Lambda, AWS API Gateway, AWS CloudWatch
DevOps	Jenkins , Docker, GitLab pipeline YAML configuration
Programming Languages	Java, JavaScript, C, PHP

Experience

Intern Software Engineer | [GTN Technologies](#) | March 2024 – December 2024 (**09 Months**)

- ◆ Integrated **LSEG’s World Check ONE API** features in a **newly** launched product (**Enterprise**) of GTN.
- ◆ Implemented case rescreening, re-initialized screenings, and handled production data updates.
- ◆ Developed admin features for managing dynamic questions using React and handled **PII** data.
- ◆ Contributed to **micro-frontend** architecture with **Single SPA** and AWS CloudWatch debugging.
- ◆ Deployed a custom symmetric encryption Node package via GitLab pipelines and managed new APIs using AWS Terraform.

Presentations During Internship

5 Key Ways to Boost API Performance

Explained strategies like Pagination, Asynchronous Communications, Caching, Connection Pooling, and Load Balancing to optimize API performance.

Database Solutions for Large-Scale Applications

Explained database sharding, its necessity for handling large user bases, and its impact on system efficiency.

Projects

- ◆ Parking Slot Allocation Service – **Rule Engine** (**OptaPlanner**, Spring Boot)
 - A service that provides an optimized vehicle parking solution using coordinates.
- ◆ **End-to-End Encrypted** Chat Application - Real-time (Full Stack, Angular & Spring Boot)
 - A real time chat application (**End to End encrypted**).
- ◆ Supermarket System with **Microservice Architecture** (Spring Boot, **Kafka**, **Eureka**, **API Gateway**)
 - Developed a microservices architecture with Spring Boot, integrating Kafka for events, Eureka for service discovery, and an API Gateway for secure routing.
- ◆ Travel Recommendation System – Ongoing Research (NLP)
 - Developing a travel recommender using review-based sentiment and emotion analysis.
- ◆ Test Automation with **Serenity BDD & Cucumber and Jenkins SCM Polling**
 - Developed UI and API automation using Serenity BDD & Cucumber, integrated with GitHub webhooks and Jenkins SCM polling for automated builds.
- ◆ Rule-Based Route Optimization System (Full Stack, Angular & Spring Boot)
 - Developed a route optimization application for goods delivery, considering constraints to enhance efficiency, reduce costs, and boost company productivity.
- ◆ Security System for school students (Hardware Project with PHP-based MySQL Database Management Server)
 - The system notifies parents about their child's attendance on the bus and at school while also providing security features.
